Outline

➤ *DELTA V3.5 & 3.6*

- **Model Performance Criteria diagrams (hourly/daily)**
- **Geo-Map: a “Target companion”**
- **Input management (myinput.dat)**
- **Additional MQO**
- **Others (Display, Cumul...)**

➤ *Towards V4.0*

Evaluation methodology: Observation uncertainty based MQO

$$|M - O| \leq U_o + U_M$$

$$U_M \leq U_o$$

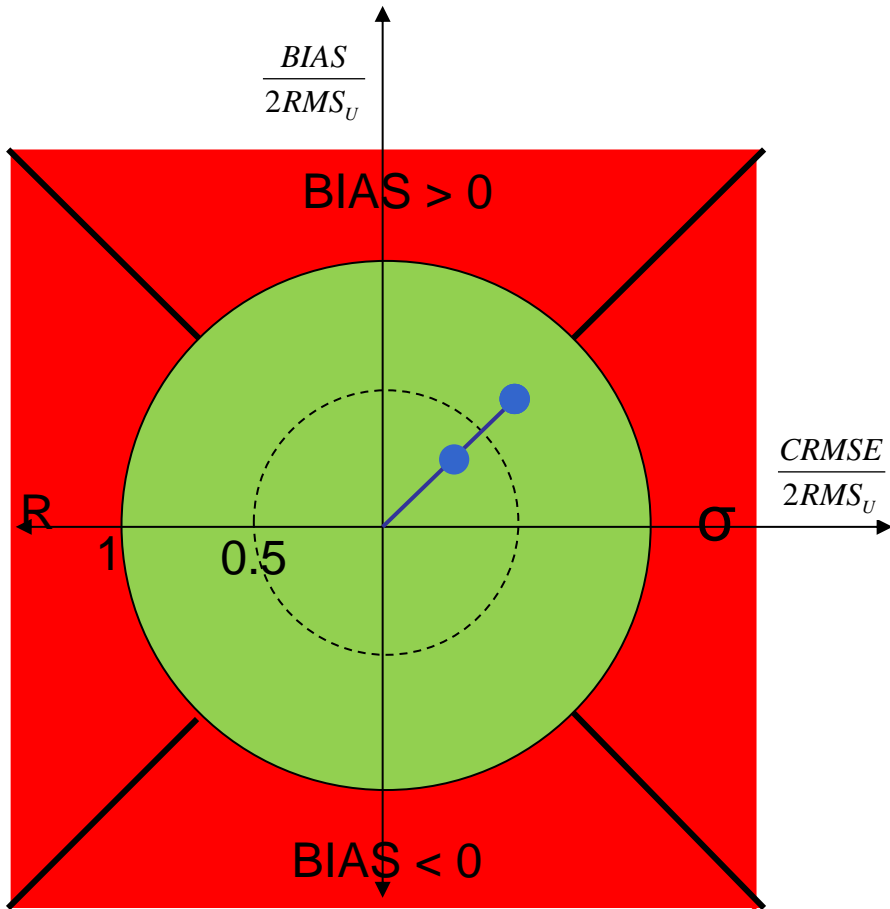

$$|M - O| \leq 2U_o \implies$$

$$\frac{\sqrt{\sum |M_i - O_i|^2}}{2\sqrt{\sum U_{o_i}^2}} = \frac{RMSE}{2RMS_U} \leq 1$$

Geo-Map: a Target companion

$$\frac{RMSE^2}{(2RMS_U)^2} = \frac{BIAS^2}{(2RMS_U)^2} + \frac{CRMSE^2}{(2RMS_U)^2}$$

$\frac{RMSE}{2RMS_U}$ = distance from origin

$\frac{RMSE}{2RMS_U} \leq 1 \rightarrow$ No significant diff between mod and obs
 $CRMSE^2 = |\sigma_M - \sigma_O|^2 - 2\sigma_M\sigma_O(1-R)$

$\frac{RMSE}{2RMS_U} \leq 0.5 \rightarrow$ Model is within meas. uncertainty

$\frac{RMSE}{2RMS_U} > 1 \rightarrow$ Significant diff. between MOD and OBS

$$|BIAS| \geq CRMSE$$

$$CRMSE \geq |BIAS| \quad \& \quad \text{Error}(\sigma) > \text{Error}(R)$$

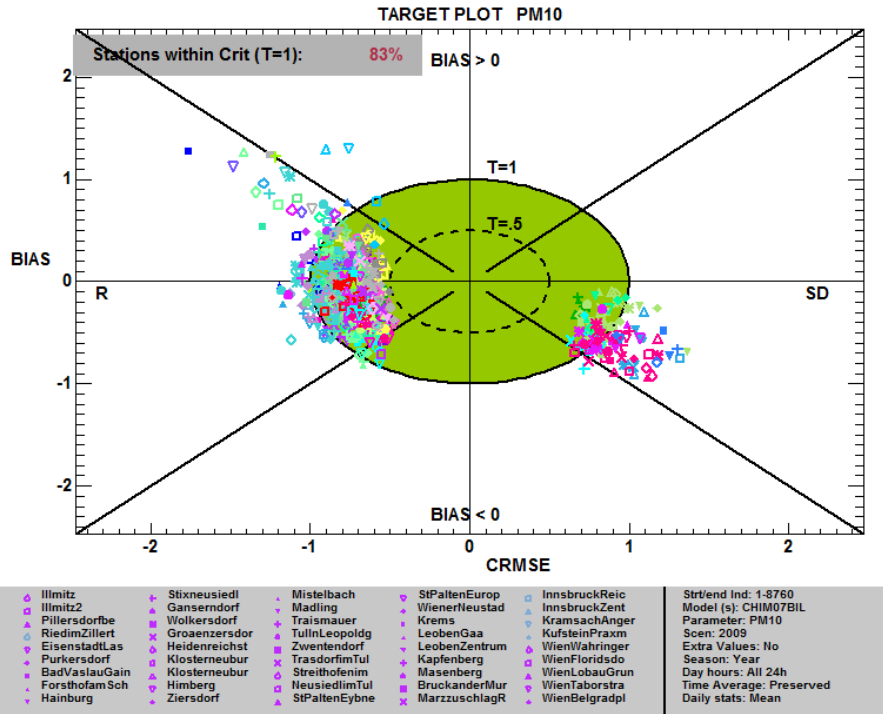

$$CRMSE \geq |BIAS| \quad \& \quad \text{Error}(R) > \text{Error}(\sigma)$$
