

What did we achieve (2020-2022)?

- We suggested recommendations for AQD revision 😊
- From pilot exercise ... “Recommendations (handbook)” to support authorities in quantifying emission / concentration changes from an available set of measures 😐
- During this Technical meeting ... ‘template to report measures’ ... group exercise 😐
 - Context
 - Delta Emission
 - Delta Concentrations
 - Impacts
 - **Need for more info on methodologies and ex-post assessment/acceptability ...**

Priorities for 2023-2025

Merge with other CT
(existing/new)

- CT5 still needed, but need for a more comprehensive approach ...
 - CT0 as 'air quality management process' ... overarching view
- Need to develop Checklist / guidance, to help preparing/reporting a plan:
 - Link to CT1 (to know main sources of pollution), CT7 (emissions)
 - Link to CT8 (exposure) and CT9 (dealing with scenarios and measures' impact)
 - But CT are very technical ... need distillate information from there
 - Coordination among levels (EU, country, ...) and sectoral (energy, ...) policies
 - Involve cities in the discussion (eurocities? ...)
- When checklist is available:
 - check 2/3 case studies, go through the whole process
- Practical exercises are a good way to interact
- DB of measures is still a good complementary idea -> need of resources

Go for another round
